Pneumatic Tourniquet

The classic **Riester** pneumatic tourniquet is a reliable device which is used during amputations to **restrict blood circulation** in the limbs. It has a **robust and very accurate manometer** to provide exact measurements and a particularly **long service life**.

- › Sturdy metal pump to produce pressure.
- › Air in the cuff can escape by opening the release valve.
- › Chromium-plated metal manometer with easy-to-read aluminium scale up to 700 mmHg.
- › Incl. upper arm cuff 57 x 9 cm and thigh cuff 96 x 13 cm, both with latex-free bladders.
- › All cuffs are made of material which can be washed and disinfected.
- › Complete in cardboard box.

5255 komprimeter, latex-free
